GADexSwap (GADex)

GADexSwap

GADexSwap White Paper 2021

INTRODUCING

GADexSwap, AMM Dex on the Binance Smart Chain

Eat raw fish until you're full? GADex's Shop doors are opening soon, and we have a new, smarter (and cheaper) farming experience ready to serve.

Why is Binance Smart Chain?

To be honest, Ethereum's gas costs are currently very high to say the least and the barrier to entry to participate in on-chain activities is getting higher and higher. Enter the Binance Smart Chain. By utilizing the BSC, we will be able to increase transaction speed while reducing costs massively at the same time. Perfect, right?

GADexSwap at a glance:

There is no pre-sale and no pre-mining. Fair distribution of all GADex tokens

The GADexSwap team will only receive 1% of all farmed GADex (for example, the Bakery team gets 1 GADex token for every 100 GADex farmed).

Maximum reward for GADex stakers. using the Binance Smart Chain for AMM DEX.

We take full advantage of the Binance community by providing arbitrage opportunities between BEP2 and BEP20 tokens hosted on Binance.com or on Binance DEX.

How to work ?

GADex is the next iteration of the now famous Uniswap. It's like Uniswap, but faster, cheaper and dare we say... better? Apart from all of the above, liquidity providers will also be rewarded with GADex tokens from which they can get a share of the GADexSwap trading fees and be used for voting as part of GADexSwap governance.

Initial Liquidity Collection (LP)

GADexSwap has the following types of liquidity pools:

No GADex rewards.

This is to facilitate the making of new LPs by the public. Only designated LPs will have a GADex prize and between them, the prize multiplier for each will vary, usually based on the value they assign to the GADex holder.

The initial set of LPs and GADex's prize multipliers are as follows:

GADex applies a fee of 0.25% for all swaps / trades, of which 0.20% will go to the Liquidity Provider (LP), and 0.05% will be converted into GADex tokens and given to GADex holders as an additional reward.

Liquidity providers are given a liquidity pool token (LP GADex) that represents their share in each pool, and can derive a portion of the fees collected in this pool when removing liquidity.

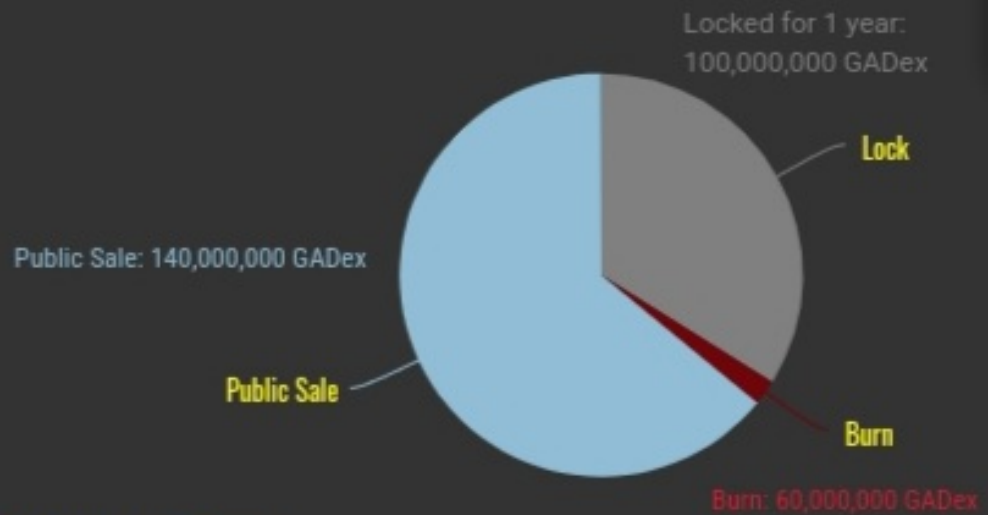

LP can then stake their LP GADex tokens to earn GADex token prizes.

How will GADex be released and distributed?

GADex tokens will be released gradually into the liquidity pool according to their respective prize multipliers (eg 1x, 3x, etc.).

Early growers (or as we like to think of them, early "GADex builders") will be highly valued in terms of the initial "GADex per block" launch.

DISTRIBUTION GAdex

Total Supply: 300,000,000 (GAdex)

Initial release schedule:

GAdex is built on 3 blockchains

- First BSC (First 1 Month) - 100,000,000 (GAdex)
- 2nd ERC20 (next 2 months) 100,000,000 (GAdex)
- 3rd HECO CHAIN (next 3 months)
- The total supply of GAdex is 300,000,000 GAdex

* 60,000,000 (GAdex) on the ERC20 blockchain will be burned when listing on the exchange

* 100,000,000 (GAdex) on the ERC20 & HECO CHAIN blockchain will be locked for 1 year.

GADexSwap (\$ GADex) works with the Binance Smart Chain (BSC) and combines three of the hottest trends in cryptocurrency and blockchain space-based agriculture, Decentralized finance (DeFi) the first DEX (IDO) offering.

One of the advantages of the BSC is that the Ethereum blockchain has recently been plagued by extremely high fees and delayed transaction processing times. This results in retail or average users being priced and unable to participate in decentralized financial activities (DeFi) or NFTs. For some investors, paying \$ 15-30 per transfer and \$ 50-100 per Uniswap asset conversion is too much.

Therefore, BSC has taken the opportunity to solve some of these problems by cloning Ethereum's most used DApps and moving it to its blockchain. This makes it an attractive alternative with low fees and nearly instant transaction processing times.

GADexSwap (\$ GADex) works with the Binance Smart Chain (BSC)

Background

Binance Smart Chain (BSC), the blockchain run by GADexswap, is a project by Binance - the world's largest cryptocurrency exchange by volume and volume of traffic. It is an Ethereum fork with a PoSA (Proof of Staked Authority) consensus mechanism and the ability to integrate with the Ethereum Virtual Machine (EVM). There are 21 validators who use BNB in large numbers and process activities.

The identities of these validators are unknown, but it is widely believed that they are Binance-approved actors. This validator requires authorization from the Binance network to run the Validator node. In addition, the ownership of BNB tokens is very much controlled by the Binance team or the founders. This is the official network.

There is no pre-mining and / or pre-sale of GADex tokens. Only 1% of tokens are reserved for the team because they believe in a fair distribution model. The distribution is leaning towards people using tokens and the total supply is 300,000,000 (GADex). Token will be released on May 5, 2021.

GADexSwap marked the launch of an interesting experiment and an attempt to include users who were not being considered due to the high fees on the Ethereum network. For a fraction of the fee and fast transaction processing, retail users can try deFI & NFT's asset and coin exchange features without taking out their wallets for a fee.

In addition, tokenomics ensures increased value and incentives for users to continue holding tokens. GADexSwap's trajectory does not appear to be decreasing, and important features are waiting to be implemented in the coming days.

GADexToken (GADex) was launched in may 2021 and is part of the GADexSwap ecosystem. Liquidity providers are rewarded with GADex tokens, which they use to get a portion of GADexSwap trading fees and vote as part of the GADexSwap governance process.

GADexSwap is a decentralized AMM (Automated Market Making) protocol based on the Binance Smart Chain (BSC). The GADex token is the native BEP-20 governance token on the platform.

Users have the option to earn GADex tokens by providing liquidity at GADexSwap, and GADex holders can use their tokens for governance votes and to receive transaction fee dividends.

How many GADexToken (GADex) coins are circulating?

GADexToken (GADex) has a circulating supply of 300,000,000 tokens, of which no maximum backup data will be available in May 2021.

The team behind the project will receive a share of the GADex prize of 1 GADex per 100 GADex bred during the farming period.

How is the GADexToken network secured?

The GADexToken network is secured through the use of a real-time security monitor and messaging system. It has on-chain monitoring and passes multiple security checks.

Where can you buy GADexToken (GADex)?

GADexToken (GADex) can be bought or sold on the following exchanges:

GADexSwap
PancakeSwap
Mdex.com
Uniswap
